Biodiversity Survey at Drift Creek Camp

May 24, 2008 ongoing

Drift Creek Camp is blessed with the unique ecosystem of a late succession coastal rainforest. We started an initiative to inventory this biodiversity with our first bioblitz on May 23-4, 2008. A team of 15 naturalists, educators and nature enthusiasts identified 200+ organisms in this initial event. We have kept up the search and presently have identified the 500+ species listed in this document. For more information including 300+ photos, please visit our website at driftcreeknaturecenter.org

Our biodiversity survey has been blessed by a highly skilled and generous team of experts. Names marked with an (*) participated in the original May 24, 2008, bioblitz event and have continued to support the effort with return visits and assistance with identification. Unmarked names have joined the effort following the initial event. Names in alphabetical order, initials used in notes on following pages:
